LONDON:

PRINTED FOR THE ZOOLOGICAL SOCIETY  
SOLD AT THEIR HOUSE IN REGENT'S PARK  
MCMXXXII.

Papers and Memoirs intended for this work should be addressed to "THE EDITOR of the Zoological Record, Zoological Society, Regent's Park, London, N.W. 8." It is earnestly requested that in the case of separately-printed copies of papers so forwarded, the *original pagination* may be indicated.

## PREFACE.

OWING to the prompt co-operation of the Recorders, it is expected that the Sixty-eighth Volume of the Zoological Record will be ready for distribution to subscribers by the end of September. The various parts have already been issued between the months of May and September.

The present volume contains 1258 pages of Record matter, a slight increase on last year when the number of pages was 1216. On the other hand it has not been considered necessary to reprint the List of Journals, though the names of a few newly established ones have been included as a supplement to the List of New Genera.

There have been no changes among the Recorders since the last issue of the Record.

In consequence of the small demand for the separate Sections of the Insecta previously available, the Committee have decided to give up the issue of the separate parts, and in future the Insecta will be issued only in a complete form at a price of 15s.

The thanks of the Zoological Record Committee are again due to Dr. W. T. Calman, Mr. J. R. Norman, and Mr. J. R. le B. Tomlin for reading proofs of those Records in regard to which they have had special knowledge, and to Mr. H. G. K. Molineux who has supplied the Editor with a large number of valuable references to titles, chiefly relating to Birds from Russian periodicals. These do not reach this country by the ordinary channels and are thus most difficult to trace.

The accounts of the "Record Fund," which is appended, shows a slight but satisfactory increase in the balance available for the present year.

## EXPLANATORY

---

This Volume is printed in the Divisions enumerated on p. vii.

The pagination of each Division is separate, and is given at the top corner of the pages. The number and name of the Division is given as a heading on each page. The date 1931 corresponding to the bulk of the literature indexed is given at the top of each page.

In the Subject Index of each Division authors are quoted by name only. The full references will be found in the Title Section of the Division.

The Literature indexed is mainly that of 1931 but includes entries for earlier years that have been received too late for inclusion in previous volumes.

### ERRATUM.

A paper published by Ortman & Walker (Vermes, p. 35) has been inadvertently included in Vermes. It should have been referred to Mollusca. It contains three new generic names not previously mentioned in the Record though published in 1922.

# I. COMPREHENSIVE ZOOLOGY

ARRANGED BY

W. L. SCLATER, M.A.

This section includes works that deal with more than one branch of Zoology, or that are of general interest to Zoologists. It is, therefore, not complete in itself as regards any one subject included in it. The special records complete each subject. A few memoirs included in the special records are repeated in this division as well as the literature on the Genetics of *Drosophila* and some other insects used as a vehicle for these special researches.

THE IMPERIAL INSTITUTE OF ENTOMOLOGY

## FOREWORD

THE attention of readers is directed to the fact that owing to the necessity of keeping the "Insecta" part within reasonable limits, entomological papers written entirely from an economic standpoint are omitted, but abstracts of these will be found in the *Review of Applied Entomology*. Very brief systematic papers, usually those dealing only with a single species, are noticed in the systematic portion only and do not appear in the list of titles.
